Abstract (en)

[origin: DE19828577A1] Production of laundry detergent moldings by mixing a granulate, containing surfactant and finely-divided preparation components, then press molding. The surfactant granulate contains a zeolite of the P and/or X type. An Independent claim is also included for the zeolite of zeolites of the P and/or X type in surfactant granulates, which increase the stability and solubility of laundry detergent moldings when mixed with finely-divided preparation components.
