Abstract (en)

[origin: FR2779743A1] The invention concerns a device comprising: a transporting cylinder (7) for supporting and transporting the textile fibre layer containing the trash; an elongated container (9) for receiving the trash; a member (8) positioned at the transporting cylinder periphery, and used for separating the trash from the moving textile fibre layer and eject it towards the receiving container; at least one nozzle (10) sucking up the trash into the container, designed to be displaced in translation by a reciprocating motion above and in the receiving container (9) longitudinal direction.
