Abstract (en)

[origin: DE19828076C1] The invention relates to a device (114) for preventing cloggings upstream from an inflow (156) of a drain pipe (154), comprising a screen element (110) for capturing deposited impurities(150). In order to produce said device, which avoids expenditures for routine cleaning especially in roof drainage systems, the device (114) has at least one cutting tool (112) located substantially parallel to the surface of the screen element (110) and a relative movement can be carried out between the cutting tool (112) and the screen element (110) so that an impurity (150) which has penetrated into the screen element (110) can be sheared.
