Abstract (en)

[origin: WO9955988A1] A booth comprises walls for delimiting a working space for manufacturing and distributing food prepared under supply of energy. To this end, the booth comprising at least one energy operated appliance and at least one compartment. At least one wall is formed by an upright standing frame (2) subdivided into at least two individual cells, which open towards said working space, by at least one strut (10) secured to the first frame (2). At least one cell receives at least one energy operated appliance (17-24) as a module, e.g. an oven (22). The oven (22) comprises at least one baking chamber for a dough to be laid onto a supporting surface that is of refractory material. The dough may preferably be made of flour including rise controlling enzymes.
