Abstract (en)  
[origin: WO9966275A1] A thermoelectric air conditioning apparatus (100) is comprised of a housing (80) having a plurality of air inlets (82, 86) and a plurality of air outlets (84, 88); a plurality of thermoelectric elements (10-18); two heat exchangers (50, 60); a temperature regulator (90), having first (92) and second air inlets (94), a main air outlet (96) and at least one exhaust outlet (98); two air circulation units (70, 76) and a control unit (160). Thermoelectric elements (10-18) are energized, and cause a reduction of temperature on one side and an increase of temperature on the other side. One air flow is forced to flow through one of the housing air inlets, over a heat exchanger and to the first air outlet of the temperature regulator. Another air flow is forced to flow through one of the housing inlets, over the other heat exchanger and to the second air outlet of the temperature regulator. The temperature of the air leaving the main outlet (96) of the temperature regulator is determined by proportioning the flow of air from the first air inlet of the temperature regulator and the air flow from the second air inlet of the temperature regulator into and through the main outlet of the temperature regulator.
