Abstract (en)

[origin: EP1090659A1] A handrail is placed around the top of the silo perimeter. The lowering of each person into the silo (1) is assured by two anchoring points located on the handrail. The silo internal perimeter is divided into as many sectors as there are persons so as to define a vertical displacement space for each person. Oxygen is supplied to each person through supply pipes (5). An Independent claim is also included for the apparatus for maintaining silo.
