Abstract (en)

[origin: EP1090752A1] The bearing is for the cylindrical vat which is contained on both sides by means of stencil rings (9) in a turnbuckle (8) mounted in an intermediate ring. (2) Each intermediate ring is flat and is spring-mounted in a side-plate (1) of the printer. The intermediate ring can swivel in relation to the side-plate and can move in an axial direction. Of two flat concentric rings the inner ring is connected to the outer ring by two diametrically opposite bridge pieces. The outer ring is joined to a holder enclosing the ring by two diametrically opposite bridge pieces
