Abstract (en)

[origin: EP1090753A2] Printing blocks are applied precisely to the surface of the printing cylinder and aligned using stop pieces on the blocks and on the cylinder in the region of an axial surface line. The stop pieces include two axially spaced stops (4,5) on the cylinder, at least one of which (4) comprises an adjusting device (12) which is effective in the circumference direction. The stops may consist of matching pins which stand above the surface of the printing cylinder, and which match holes in the blocks.
