Abstract (en)
[origin: EP1091030A1] An awning fabric comprises a base fabric with warp (12) and weft (14) of high light transmission yarns. To produce a gradual change in light transmission along the fabric, the weft includes yarns of low light transmission (16) at variable spacing or of different composition. Independent claims are also included for following methods of producing such fabrics: (a) weft yarns of low (16) and high (14) light transmission alternate and their spacing is changed over a distance of at least 10 cm along the fabric length to obtain a gradual or stepwise light transmission change; (b) similar light transmission changes are obtained by using weft yarns of different composition.
