Abstract (en)

This system is for use in industrialized building and permits constructing at very reasonable prices. It is based on the repetition according to the project , of a basic cell constructed on site with appropriate moulds which leave an empty space in the concrete slabs where prefabricated slabs are inserted . It satisfactorily resolves technical problems because of the modularity and stability of the mould elements , the ensuing modularity of the basic cells, the thickness of the concrete slabs is very reasonable in respect of the distance of the bearing walls and for its versatility as it can be used for many different types of projects, fig. 3 - 4 - 5 - 6 - 7. <IMAGE>
