Abstract (en)

[origin: EP1091075A1] The interior wooden trim is in the form of strips or mouldings (20) with T-section channels (26) on their inner surfaces, attached to the internal surfaces of plastic door or window frames (2) by studs (30) set at intervals. Each stud has a polygonal base and a pivoting head in the form of a bar which is inserted between the side members (24, 25) of the T-section channel and rotated to lock it in place. The bar is pivoted to the stud base by a screw.
