Abstract (en)

[origin: EP1091575A1] The invention relates to an electronic programme guide display of the type generated on a display screen (102) by a broadcast data receiver connected therewith, from broadcast data received from a remote source by the receiver (103). The display comprises identification means for a number of programmes and the invention provides that a user of the guide can select a particular programme for viewing and/or to obtain further information and upon doing so an indication means is generated to provide further information to the user. The indication means can be a symbol (18; 20) visually displayed in response to the selection, an audio message to the user, unabbreviated programme information and/or the like. The indication means can be provided in an additional area (114) of the display if required.
