Abstract (en)  
[origin: WO0000103A1] Dental implant component (10) on which a dental prosthesis (30; 40) or core part thereof is intended to be fabricated having a proximal end (2), a distal end (6) and a channel (7) which extends from a proximal opening (9) in the proximal end to the distal end, characterised in that the dental implant component is provided with a roof wall structure (5) at the distal end of which a predetermined area (18) is adapted to be removed to provide a distal opening to the channel of predetermined dimension for enabling a post (50) to be positioned in the channel during fabrication of the dental prosthesis or core part thereof with a close fit being formed between the post and the distal opening.
