Abstract (en)

[origin: WO9946177A1] A fuel tank closure system (10) includes a filler neck (12) and a fuel cap (14) engageable with filler neck (12). Fuel cap (14) includes a closure (16), a seal (18) coupled to closure (16) to engage filler neck (12), and a spring (20). Closure (16) includes a handle (24) and a lug (34) engageable with filler neck (12). Handle (24) is adapted to move lug (34) between an engaged position securing closure (16) in an axially and a disengaged position permitting closure (16) to move between axially inner and outer positions. Spring (20) moves closure (16) relative to filler neck (12) to the axially outer position while lug (34) is in the disengaged position.
