Abstract (en)

[origin: WO0002142A2] According to the invention, an information content of several objects in relation to a defined electronic reference object is determined in such a way that for each object a degree of similarity is determined by means of which the similarity of the object concerned with at least one other object and/or the reference object is described. When the information content is determined the degree of similarity and the object information content of an object concerned is taken into consideration.
