Abstract (en)

[origin: WO0000990A1] The invention concerns a method for making electrically conductive flat cable bundles, said cables being formed by flat strips made of conductive material separated from one another and enclosed between two layers made of non-conductive material. Said method is characterised in that it comprises the following steps: cutting up a conductive material into a plurality of strips; distributing the cut out strips between two sheets made of non-conductive material; assembling the non-conductive sheets and the conductive strips to produce a flat cable layer (10). The invention also concerns a corresponding device and a method and a device for making cable bundles using such flat cable layers.
