Abstract (en)
[origin: DE19829052C1] The linear motor has a primary part (1) and a secondary part (6) with a series of permanent magnet poles (10). The secondary part has a greater length in the movement direction than the primary part. The primary part has reception slots (9) for a single-phase or multi-phase primary winding, and end pieces (2) for altering the magnetic force in the movement direction. The end faces of the end pieces (14) extend perpendicular to the movement direction.
