Abstract (en)

[origin: WO9951057A1] The invention relates to a method for producing a hearing aid with shielding from electromagnetic radiation by applying a metal coating to parts of or all of the housing frame (8) and/or the insides of the housing side parts. Said metal coating is applied using a vapour phase plasma deposition technique with a thermal metal vapour source (25, 26). The invention also relates to the corresponding hearing aid with shielding from electromagnetic radiation.
