Abstract (en)

The support is comprised of a laminar surface consisting of a flexible sheet provided with a plurality of holes having a diameter which corresponds to the sizes of capsules from 000 to 5, said holes being made in the sheet and in an arrangement corresponding to the surface of a manual filling machine. The invention also relates to the use of said lamellar surface with capsules inserted into the orifices in order to position the capsules on the filling surface of the corresponding machine. Industrial application as an aid for the encapsulation using small encapsulating machines. <IMAGE>
