Abstract (en)
This is made up of a section of woven tubular mesh (1) and at least one section of a resistant and flexible laminar band (4,5) applied, as a minimum to one side of the mesh part, joined to the latter by two welding lines (6,7) near the vertical edges of the laminar band section and by two transversal welding lines (8,9) that respectively define the top and bottom of the bag. A third transversal welding line (10) on the upper part defines a rectangular transversal area (11) in which there is an attaching handle (12) that can be replaced by holes (13) for inserting the fingers of one hand. It is applicable to a container intended for grouping, showing and carrying fruit and vegetables. <IMAGE>
