Abstract (en)  
[origin: EP1092815A1] Fireproof wall of high height has a part integral with the upper roof (2a) and a part integral with the lower floor (2b). The superior part (1) has a sheet (11) folded and opened in the inferior end in which the inferior part (3) can slide. The inferior part is made of metallic vertical posts (4) surrounding a core of fire-resistant material (7) and covered by plaster sheets (6). The upper part is made of metallic structure linked with the sheet and the roof and coated with plaster.
