Abstract (en)

[origin: EP1092936A1] Firearm has two superposed barrels (1, 2) attached by central band (3). Band is brazed with silver along nearly whole length of upper barrel (1), and only along small part of lower barrel (2). At end of firearm, barrels are kept apart using ring (5) slid on lower barrel, and resting against shoulder (6). Ring is located between shoulder and muzzle (7). Muzzle is kept in place using screw. Screw goes through spacer between part (8) of muzzle, and band; width of spacer determines relative position of barrels in lateral direction. Independent claims are also included for (a) the method for adjusting geometry of front barrels, and for (b) the adjusting mechanism.
