Abstract (en)

[origin: FR2780774A1] The invention concerns a passive fail-safe device for a mobile craft such as a helicopter (10), comprising at least a decoy dispenser (LL, LL') mounted adjustable on said craft, automatically controlled by a detector of hostile element (D) and a navigation unit (CN). The invention is characterised in that it comprises means for setting up a dynamic decoy library based on data supplied by said detector and by said unit, so as to define decoy sequences wherein the orientation and timing for launching said decoys are optimised.
