Abstract (en)

[origin: WO9967936A1] The invention refers to a device for a communication apparatus (1). An elongated element (2) is by a first end attached to the communication apparatus (1) and includes an attachment member (3). The attachment member (3) is provided at the second end of the elongated element (2), which end is turned away from the communication apparatus (1). Furthermore, the attachment member (3) is arranged to permit attachment of the communication apparatus (1) to e.g. a clothing of a user. Advantageously, the elongated element is retractable to a collecting member (4) of the communication apparatus (1).
