Abstract (en)

[origin: EP1093732A1] The invention relates to a support for a height-adjustable table having at least one height-adjustable leg, consisting of an outer and an inner leg and means for height-adjustment of the leg. The means are completely concealed in the legs and substantially comprise a strip of resilient material to be mounted under tension in the outer leg and having its free end provided with a locking member, said locking member cooperating with complementary locking means mounted in the inner leg. The locking member can be brought in and out of locking engagement through an opening in the outer leg. <IMAGE>
