Abstract (en)

[origin: EP1093735A1] The running rail structure for a sliding drawer has a mounting and a height adjustment system. It has a base plate with two pins and an eccentric. The first pin is hollow, for the eccentric to pass through. The second pin has a sprung holding projection at one end extending towards the first pin, to engage an opening in the running rail. The eccentric has an eccentric pin to extend into a longitudinal slit from one end of the running rail. The first pin has a cutback section at an end zone, to extend into the end of the running rail.
