Abstract (en)

[origin: EP1093998A2] A signal light that is attached to a life saving equipment on a boat, e.g. a life belt, is held by a collar (12) attached to the mounting bracket (11). The collar is closed by a safety catch attached to the dragline (57) connected to the life saving equipment. The dragline is also attached to the signal light. The light is held upside down by the clamp, with the clamp gripping completely around the light. The clamp has hinged sections to enable it to open rapidly and release the light.
