Abstract (en)

[origin: EP1094000A2] The parachute is inflated or stiffened to form an airfoil-section of square or rectangular planform. Lines (3) extend down from the corners of the parachute to the upper part (13) of a cylindrical container (2). The container is split along a flat horizontal surface forming a diameter of the circular cross-section. The top part contains control and navigation gear and the bottom part (23) contains the payload.
