Abstract (en)

[origin: EP1094168A2] The yoke (11) has a first arm (13) for connecting with the shuttering plates (9) and a second arm (15) for fixing on the wall or roof shuttering. The two arms are connected together seamlessly through a curved section which together with the two adjoining arms are all produced by bending or bending and stamping from metal. The first arm can be provided with means for horizontally fixing and aligning the shuttering plates.
