Abstract (en)  
[origin: EP1094180A2] A latch arrangement (10) including a latch bolt (12) connected to release means (14) by a transmission path (16), normal actuation of the release means causing unlatching of the latch arrangement, the latch arrangement further including an actuator (28) operable to provide a break in the transmission path following the occurrence of a predetermined normal condition of an associated vehicle, the transmission path being re-established by operator indication of an unlatching requirement following the predetermined condition ceasing to exist. <IMAGE>
