Abstract (en)

[origin: WO0060985A1] A sliding device for cloth stripes with bows for hanging up pelmet curtains and similar, consisting of a structure, preferably out of plastic material, with a concave portion of cylindric surface so as to fit to the corresponding shape of the support (B), and provided with one single upper eyelet (2) through which the ends of each couple of cloth stripes (F) are inserted, crossed and tied between each other so as to realize an upper bow (FO) and to completely eliminate the contact between the cloth of said cloth stripes and the material of the support, thus facilitating the lateral sliding of the curtain.
