Abstract (en)

[origin: DE19920204A1] The invention relates to a holding device (10) for a spectacle glass (24), for introducing the spectacle glass into or removing it from a container and/or for placing the spectacle glass on or removing it from a spectacle glass holding shaft of a spectacle glass edge machining device. The inventive device comprises a handling device consisting of a socket (11) which is held by the handling device and which has a hollow section (12), a controlled vacuum connection (14, 16) on said hollow section (12), a spherical cap (17) that is located in the hollow part and rests closely against a ring surface of the hollow part and has an opening (18) for deepening, and a sealing area (20) on the edge of the spherical cap for placing on an optical surface of the spectacle glass (24).
