Abstract (en)

[origin: WO0001776A1] The invention concerns a coating capable of being spread substantially evenly on a surface, comprising a binder and a ferromagnetic constituent, in particular iron oxide. The invention also concerns a method for coating a surface with said coating and a coating machine for implementing the method, comprising means (11) for coating a support (9), in particular cardboard with said coating, said machine comprising means for heating a hot-melt adhesive and applying it on said support (9). The invention is applicable in the paper-making and building industries.
