Abstract (en)

Production process for wood conglomerate boards, based on elongated particles which are glued to form a blanket in which said particles run longitudinally or with slight deviations. Said blanket is pressed with heat and steam applied for curing the glue. The elongated particles which make up the board have an approximately curved triangular cross-section, with a length between 70 and 300 mm., a width between 4 and 30 mm., and a thickness, defined as the smallest height of the triangular section, between 0.5 and 4 mm. <IMAGE>
