Abstract (en)
A connecting device (10) is disclosed for use in connecting a container to a fluid delivery line. The connecting device (10) comprises a main body (11) defining a fluid pathway (24), and a valve arrangement (19) in the pathway. The valve arrangement (19) comprises resilient urging means (20) and a valve member (22) movable between a closed condition and an open condition. The resilient urging means (20) urges the valve member (22) to the closed condition. The valve member (22) and the resilient urging means (20) are provided as a one piece unit. <IMAGE>
