Abstract (en)

[origin: EP1096078A2] The process is for connecting together contiguous sheets (1,2) of building materials. The sheets each have a flat rabbet surface adjacent to the joint line, and the resultant shallow channel (20) is covered by a web (3) fixed to both of the sheets. The channel (20) is approximately 0.5 - 1.5 mm depth, and the web may have a self- adhesive backing. The web may be covered with a filler composition.
