Abstract (en)

[origin: EP1096088A2] A blocking mechanism is between a stationary (21) and a movable (20) door-leaf. The movable leaf or a door-fastening connected to it has a slide-arm (1) one end of which is linked to a slide piece (2) running along a slide-rail (10) in or on the door-frame. A locking element (3) cooperates with a catch (6) operated by a release mechanism (14) from the stationary leaf. The catch fits into at least one recess (4) in the locking element.
