Abstract (en)  
[origin: EP1096218A2] The laying mechanism (10) for a fragmentation round launch tube (12) has a rapid setting for azimuth in the foundation (15), with at least two azimuth setting motors (14) acting on the carrier ring (18), parallel to the azimuth axis. At least one setting motor can be reversed into a drive in the opposite direction, to block the movement from the other motor when the carrier ring (18) has reached the azimuth setting for the launch. The static setting motors are contained within the pot-shaped foundation, with one motor (13) for elevation and a motor (14) for azimuth.
