Abstract (en)
[origin: WO0002582A2] The invention relates to the treatment of inflammatory bowel diseases, such as celiac disease with interleukin-15 (IL-15) antagonists. Preferably the antagonists are muteins of IL-15, antibodies against IL-15 or IL-15 molecules bound to chemical groups that interfere with the ability of IL-15 to effect a signal transduction through either the beta or gamma -subunit of the IL-15 receptor complex, but which do not interfere with IL-15 binding to IL-15R alpha .
