Abstract (en)
[origin: WO0004050A2] There is disclosed an isolated nucleic acid molecule encoding a human neurotrophic growth factor designated enovin and having the amino acid sequence illustrated in Figure 1, 21, 23 or 24 or encoding a functional equivalent, derivative or bioprecursor of said growth factor. The growth factor preferably comprises the amino acid sequence from position 27 to 139 of the sequence illustrated in Figure 1, or a functional equivalent, derivative or bioprecursor thereof. The nucleic acid molecule encoding enovin can be used to transform a host cell, tissue or organism by including it in an appropriate vector. The host cell, tissue or organism and the vector also form part of the invention.
