Abstract (en)

[origin: WO0003556A1] The invention concerns a system for locating mobile telephones capable of communicating with a first reception terminal of a reception terminal network supervised by an operational management centre. The mobile telephone comprises means for estimating at least one parameter representing position relative to a terminal, and means for transmitting data concerning said parameter to a server via the first reception terminal, and the server comprises means for comparing data concerning said parameter with a pre-established mapping of said parameter, and estimate therefrom the mobile telephone location.
