Abstract (en)
[origin: EP1097669A2] A steam condensation chamber (1) for a dishwasher is described comprising a washing tub (10) and forced suction means (12) for sucking the steam that is present in the washing tub (10) and to output the steam. The condensation chamber (1) comprises internal ducts (8) with small section for favouring the condensation of the steam in a steam path (2) that is substantially shaped as a reversed "J", one end (6) of which communicates with the washing tub (10) by means of an opening (3) while at the other end suction means (12) are associated. <IMAGE>
