Abstract (en)

A packaging container (10) for photosensitive film has a detent locking and unlocking feature that provides light-tight closure of the container compartment (12) to protect the product from the penetration of light. The closure (40) and container compartment (12) each has at least one cooperating thread (36,42) for tightly fastening the packaging container (10). A protuberance (20) formed in a portion of the container compartment (12) interlocks with a notch (24) formed in the closure (40) for preventing axial movement of the closure (40). The interlocked protuberance (20) and notch (24) form the light-tight packaging container (10). <IMAGE>
