Abstract (en)  
[origin: EP1098341A1] The invention relates to a housing for electrical apparatus, especially for differential current detectors that can be coupled to automatic switches, comprising a base (1) and a lid (2) defining the location of the corresponding mechanism. A piece (9) is coupled frontally to said array, said piece having a protruding configuration (10) which serves to fit said piece and allows for a limited insertion and removal movement in the open front part of the base (1) beneath a complementary piece (5) defining the locations for the connection terminals. Said front piece (9) defines grooves (11) on the outer side in which the external connecting wires can be located in relation to the corresponding application disconnecter.
