Abstract (en)
[origin: WO9961010A2] The present invention relates to a pharmaceutical composition comprising cAMP-increasing compounds in low dose and at least one meiosis-stimulating compound for the treatment of infertility and to the use of low dose cAMP-increasing compounds alone or in combination with at least one meiosis-stimulating compound to increase the rate of fertilization in a mammal and for the preparation of medicaments. [origin: WO9961010A2] The present invention relates to a pharmaceutical composition comprising c-AMP-increasing compounds in low dose and at least one meiosis-stimulating compound for the treatment of infertility and to the use of low dose c-AMP-increasing compounds alone or in combination with at least one meiosis-stimulating compound to increase the rate of fertilization in a mammal and for the preparation of medicaments. The preferred c-AMP-increasing compound is Hypoxanthine. The meiosis-stimulating compound is FF-MAS (4,4-dimethyl-5alpha-cholest-8,14,24-trien-3beta-ol).
