Abstract (en)
[origin: WO9962645A1] The invention discloses a method for creating a decorative coating on vitreous surfaces, notably on bottles. The process involves the removal of any existing slip coating using an ammonium bifluoride solution, rinsing and drying the objects concerned. The coating is a polyurethane coating applied as a vapour curable liquid pre-polymer. The resultant coating exhibits improved adhesion and resistance to scratching and decorative finishes can be incorporated into the coating.
