Abstract (en)
[origin: DE19835031A1] In a shelf that is designed as a warehouse lift with supports for stored items (15) in the form of a board with opposing side walls (6,7), at least two interspaced supporting elements (8,9 or 10,11) with a triangular hollow profiled cross-section are arranged above each other on the outer side of a respective side wall. Said supporting elements are themselves supported by bearings (3,4) that also have a triangular hollow profiled cross-section. The special design of the supporting elements and bearings enables the available storage space for storage items (12-14) to be used in an efficient manner, in addition to providing a highly rigid or resistant support.
