Abstract (en)

[origin: EP1099623A2] The system has at least one inflatable sack (12) that forms a rectangular cross-section barrier when inflated in conjunction with a flexible stiffening device (18) inside the sack. The stiffening device is formed by at least one cloth fixed to a longitudinal edges (22) of the sack that determine the barrier state of the sack so as to span the internal cross-section of the inflated sack.
