Abstract (en)
Said packaging comprises an accessible body (1) having one or more thermoinsulating walls surrounding said thermosensitive product (P) consisting of an envelope (2) made of an open cell type foamed flexible polymer, said envelope being delimited by an impermeable inner ply or cloth (3) and an impermeable outer ply or cloth (4), which consist of a metallized plastic sheet forming a barrier against gas and/or liquid diffusion exchange through the envelope (2), and at least one container (5) for a refrigerating element (6) forming an enclosure for the thermosensitive product (P). All elements forming part of said packaging are disposed separately for transportation and storage when they are not being used and have a flat compact configuration. They can be mounted and assembled for utilization by a user at a desired moment. <IMAGE>
