Abstract (en)

[origin: EP1099819A2] The ornamental unit has an outer rail (12) with a connected, relatively movable drive element (20), especially a drive rod (21), whereby the outer rail and drive element are held in a desired relative position in the rail's longitudinal direction by a securing element (1) to prevent relative movement. The rail and drive element are held essentially without play relative to each other in the longitudinal direction. Independent claims are also included for the following: a method of manufacturing an ornamental unit.
